With each new version of Lightroom, Adobe has improved the raw file support in the program. And while Lightroom 5's handling of raw files is still not as robust as we would like it to be, we are certainly enthusiastic about the direction that they are going.

Elements also lets you add effects using a photo's colors, textures, and patterns, and it includes a new feature called Style Builder. It provides a gallery of six built-in and user-created styles that can be applied to a seemingly unlimited number of images. The styles are available for five categories, including Black and White, which enables you to change an image's colors and contrast, and give it a more stylized look. The other categories include Warm and Cool, which let you give your photo a more vibrational or thoughtful look, and Soft, which lets you add lightness and softness to an image. The last category, Mixed, serves as a compilation of the other four categories. The Style Builder tool lets you find the styles you want to use in one place, and then a simple drag-and-drop process lets you add existing and custom styles. You can save your new style in a separate library, and then you can apply it to multiple images. You'll find that Styles give your images a polished look. Of course, you'll also find these capabilities in

Elements, but it's nice to see them in a stable, non-beta release. The features have improved with each version of Photoshop, but there are a few things such as the long startup time and the lack of new editing features that have stood still for version countless. So, in current day, Photoshop is still a great option for advanced designers and the suggestion is to use existing features as much as needed and to use plugins or type-in-place when possible. Even after all those years, Photoshop remains as good as it has always been.
