If you are working in a full-time job, then you will likely be a Mac User but if you are the creative type, it may be perfectly acceptable to have a PC for your work. When working on my coursework I had Macs at both universities that I studied at and computers at both home and at uni. Personally I prefer Macs for most things, the only time I have ever been technically challenged is when working with .eps office files or files created on Macs that had been saved on a Windows machine. It is easy to setup and copy, transfer or clone your original files, documents, applications, contacts, calendars, etc., between local or web files to Adobe CC. It is as easy as drag and drop. As we made the transition to native threading and dynamic CUDA inspection and sizing in Photoshop CC, we are continuing to enhance the robustness of our native interface and provide better integration with the core features of the Application. For further enhancements and improvements to the interface and user experience, Adobe will continue working on the path to a future where Photoshop runs on the underlying macOS machine graphics, and macOS retina display, and can rely on the core properties of the GPU to render graphics. Adobe will strengthen the Q&R and Actionable features of the Application to more easily support the depth of the integration between the Application and macOS.
