Irfanview. I like that it also works as a viewer for png and gif. Best regards Pete. What you are asking for has already been asked and answered. You can't do it. The ability to do so has been asked for and has been answered. Even if it is a complicated thing to do, it can be done. It doesn't work with PNR or DP2P files. These are compressed video files that are used by Blu-ray and dvd drives. They require a special codec. Apple can't include that codec in the iMovie app because it would be a violation of the Blu-ray standard. I can easily rotate jpgs using it. - I just figured out how to open PNR's with iMovie. I go into the "My Photos" folder and right click on the file and select "Open with iMovie". When you open a PNR, you can add metadata and you can open it in the Photos app to view it. If you go to Photos and select "View" you can select "As PDF" and it will open the PDF for that PNR. What you are asking for has already been asked and answered. You can't do it
