The creative process is subjective. Photoshop skills are a dime a dozen; what takes someone extraordinary is being able to recognize and capture a scene in a different way. In these digital days with the speed we all have access to, sometimes having that perspective can help you see things you won't see if you wait to see it in the "real" world. The initial release of the iPad Pro is limited, but it's not hard to imagine that this could be a game-changing device for creative professionals. The thing that attracted me the most about it in person is the pro-level capabilities. In my mind, a pro workflow can immediately be more efficient and helpful. For now, it's hard to imagine a combination I'd want more than this iPad. The screen is superior to an equivalent HDTV. It can further that advantage with the small form factor. The app includes the most useful features of the iPad Pro. It is still much less powerful than the 2017 version of Photoshop. Selecting an object in Photoshop means to highlight or click on whichever object you want to select. The easiest way to select an object is to hover over it and then click on it. The most effective in terms of which objects you can select is to use the direct selection tool. For the most part, you can only select one object at a time because of the way that the direct selection tool is programmed. This is not a problem with most other types of selection tools like the marquee tool. Photoshop also comes with a number of other tools, such as a powerful layer tool—an essential tool for creating more complex images—and a versatile type tool that will allow you to add text and other effects. Open your Photoshop and look in the top menu for the **File** menu. Click **Open**, and then select the photo you want to edit. For this example, we want to edit a colorful photo. Create a new document, and then drag the photo onto the new document. Now you are ready to begin editing with Photoshop. Begin with the basic functions. The most basic function included is the **Filter** menu. You can use it to adjust the contrast and brightness of the picture.
