Improvements: Build #818 01.17.2006, 05:40 7 4 4
Media Info Description: Media Info is a simple, easy to use component to show information about the files contained in a project. The component is in it's second release, having been conceived as a free replacement for the TRichText component. Media Info: What's new in this version: - Updated to work with D2010 and Delphi 7. - More information is now displayed when saving the files (if the project contains references to other files). What's new in this version: - Updated to work with Delphi 7. - More information is now displayed when saving the files (if the project contains references to other files). Description: MaxiSonus brings a proven DSP solution to the audio world with its flagship DSP sequencer. The most advanced sequencer on the market today, MaxiSonus is the undisputed leader in music production software. With MaxiSonus, the world of MIDI music production is not a pipe dream anymore. The MaxiSonus DSP Sequencer enables you to produce professional quality music on the PC with a minimal amount of time and effort. Its revolutionary, graphical user interface provides all the features and functions of a traditional hardware sequencer, but with the added benefits of a DSP sequencer. The Audio Track Editor is a fast, yet powerful tool for working with audio. It features the most complete and intuitive set of audio editing tools available on the market today. Whether you are a beginner or a seasoned professional, the Audio Track Editor is a must have tool for any musician, producer or engineer. The Maxi Sonus Sampler is an award-winning software synthesizer that lets you create your own music. This version adds a new 'Sampler' synth model to the existing 'Classic' synthesizer, in the same vein as the MaxiSonus Reverb and Distorsion. Description: Description: ChangePasswordGUI.pas is a component that provides a free, flexible way to create a graphical user interface that allows the user to change a password. It uses the standard TWinControl objects, and is compatible with all Delphi versions.

What's New In THTMLButtons?

THTMLButtons is a component that simplifies the creation of standard, flat and Borland-style buttons. Features: This component contains a set of standard, flat and Borland-style buttons. You can add them to your applications using a variety of methodologies. Standard and flat buttons are similar to Delphi standard buttons. They are simple to create and can be added to your applications by simply specifying the type of button and the name of the associated procedure. For Borland-style buttons, you can add a procedure to an existing VCL-based class or to a new one. The control can be created on the fly when needed. HTML-formatted text can be added to each button's caption and a multiline caption can be added. Buttons can be automatically added to your applications or added using the Add method. A method of adding buttons is provided for each button type. HTML documentation for each control is available for developers. You can view it when the control is added to your project. Styles: Various style properties can be customized. The default style has background and foreground colors and a white font. Properties: Common: Alignment property: Sets the vertical alignment of the control. For Borland-style buttons, the default value is BOTTOM. Background property: Sets the background color of the control. Caption property: Specifies the caption of the control. FgColor property: Specifies the foreground color of the control. Font property: Sets the font of the caption. Left property: Sets the distance from the left edge of the control. Parent property: Specifies the parent of the control. Right property: Sets the distance from the right edge of the control. Top property: Sets the distance from the top edge of the control. Width property: Sets the width of the control. Caps property: Enables the user to select one of the control's possible states. The default value is False. Checkmark property: Specifies the color of the checkmark. Color property: Sets the text color of the caption. Default property: Specifies the default text color of the button. Height property: Specifies the height of the control. Visible property: Specifies whether the button is visible or not. StyleEvents property: Specifies a list of events for the control. Tag property: Specifies the tag of the control. Text property: Specifies the text to display on the button. TextColor property: Sets the text color of the button. Html property: Enables the user to specify HTML-formatted text to display on the control. MultiLine property: Specifies if the caption can span multiple lines. The default value is False. Span property: Specifies whether the control can span multiple lines. The default value is False.

System Requirements:

Supported system: Intel(R) Core(TM) i3-3220 CPU @ 2.90GHz Intel(R) Core(TM) i3-3220 CPU @ 3.30GHz Intel(R) Core(TM) i5-3210 CPU @ 2.80GHz Intel(R) Core(TM) i5-3210 CPU @ 3.40GHz Intel(R) Core(TM) i5-3230 CPU @ 2.90GHz Intel(R) Core(TM)
