The new interface debuted in October 2018, and it's now available for desktop-only versions of Photoshop as well as Photoshop CC and Elements. In addition to many new features, the interface is also very similar to the new Adobe XD app that debuted at Ignite 2017. It includes a new full-screen preview window, and the ability to drag and drop assets into your project. The Layers panel--which has been completely redesigned--still shows the layers on top of each other, the old way, but it also shows where an object is if it's masked. You need to switch to the Layers menu first if you want to see the object in question.
