Editor Brightness-Contrast dialog box allows you to manually set the color balance for a scene, which adjusts the overall white balance without altering the white point. You'll also find the ability to control the shadows, highlights, blacks, midtones and whites individually. The dialog box also has a Color settings tab that enables you to control your image color beyond standard color balance. It lets you see the image while you're shooting, with color and lighting tweaks. You can also single-click on a color band (such as traffic), or erase part of a color band. Applying styles to a group of layers—such as the Fill, Stroke, and Gradient styles from the Appearance panel—is easier than before. Simply select the layers that you want to affect, and the Style panel opens to show the styles available. You can select a style and apply it to the entire selection, or modify the style to give it new properties; select the Inverse icon to make the change “cascade,” where the first layer you style with the changed style becomes the starting point for the next one.

The canvas can be resized as the user prefers, but you should first test your intended size on the actual device you're planning to use. The canvas cannot be resized below the default size of 1,280 by 850 pixels. Because the canvas is a bitmap, the size of the canvas changes with each change in the user's zoom level. It is best practice to label the canvas using an element with a unique ID, so that you can easily identify the canvas by id from each placement of the element. Adobe has also introduced a set of new variables: `canvas.width` and `canvas.height`, which control the resizing properties of the canvas. The default canvas width and height are 1,280 by 1,068 pixels. Both of these properties are read-only, but can be set using the `setAttribute()` method. Before setting these attributes, you should also set the width and height of the canvas using the `scale()` method. Here are some of the new features that they're currently testing and will be making available in free updates to the software. First of all, the new releases are not meant for the Photoshop product's retail users. The new move to highly performant and modern native APIs is based on the changes to the internals of the application, however improved performance is not something that users will notice. Graphic designs are still drawn on a vector platform. "There are plenty of Adobe users who will not notice a performance improvement," says Adobe engineers Yury Kornilov and Petter Granlund.
